

STORYBOARD

60-SECOND WSP PROMOTIONAL FILM

Engineering Tomorrow | AI-Assisted Brand Film Concept for WSP

01 PROJECT OBJECTIVE

A cinematic 60-second concept demonstrating how engineering, advisory expertise, and AI-enabled production come together to communicate WSP's vision of shaping sustainable communities and resilient infrastructure.

02 CREATIVE APPROACH

Authentic engineering storytelling meets AI-assisted production. Every scene is chosen to visually reinforce its voice-over line, with AI applied strategically to accelerate production and visualise complex engineering ideas while keeping the film human-centred.

ACT I — UNDERSTANDING

SCENE 01

"At WSP, engineering begins with understanding."

VISUAL

A senior engineering leader overlooks the city at sunrise, reflecting before the day begins.

WHY

Opens on insight before action engineering starts with understanding people, place, and what's ahead.

SCENE 02

"As cities grow and the world continues to change."

VISUAL

A cinematic aerial view reveals a modern city's integrated transit, public space, and evolving infrastructure.

WHY

Establishes the scale of growth and complexity that engineering must respond to.

SCENE 03

"The decisions we make today will shape how people live tomorrow."

VISUAL

An engineer studies a bridge scale model, evaluating the design before construction begins.

WHY

Early design decisions carry long-term consequences; thoughtful planning shapes tomorrow.

ACT II — INSIGHT & COLLABORATION

SCENE 04

"At WSP, engineering begins with understanding."

VISUAL

An engineer interacts with a Digital Twin, analyzing a virtual city before construction begins.

WHY

Understanding is built through analysis and visualization exploring scenarios before committing to reality.

SCENE 05

"Bringing together advisory expertise, science, data and technology to see challenges differently."

VISUAL

A multidisciplinary team collaborates around a bridge model, reviewing a digital design on-screen.

WHY

Shows disciplines converging: technical, scientific, and digital expertise evaluated together.

SCENE 06

"To design resilient infrastructure."

VISUAL

An engineering team reviews a large-scale urban model against a live digital infrastructure simulation.

WHY

Resilience is designed, not assumed, through collaboration and digital simulation before construction.

ACT III — SUSTAINABILITY AND INNOVATION

SCENE 07

"Protect natural resources."

VISUAL

A modern energy facility is monitored through intelligent digital overlays tracking environmental performance.

WHY

Technology in service of stewardship efficiency and environmental monitoring together.

SCENE 08

"Create more sustainable places."

VISUAL

An architect develops a sustainable urban design, weaving green space and nature into the built form.

WHY

Sustainable places begin at the drawing board: architecture and nature planned as one.

SCENE 09

"And connect communities through smarter mobility, energy and the built environment."

VISUAL

An aerial highway interchange is overlaid with intelligent digital connections, visualizing a smart network.

WHY

Makes the invisible visible: the connected intelligence behind safer, smarter transportation.

ACT IV — IMPACT AND SHAPING THE FUTURE

SCENE 10

"Energy and the built environment."

VISUAL

A wind turbine operates with subtle AI-powered energy-flow visualization woven into the frame.

WHY

Renewable energy shown as integrated infrastructure, not a standalone icon.

SCENE 11

"Because progress is not measured only by what we build, but by the positive impact it creates for people and the planet."

VISUAL

A child walks safely through a vibrant, people-centered community of green space and everyday life.

WHY

Shifts focus from structures to people the true measure of engineering's success.

SCENE 12

"Turning possibility into lasting progress."

VISUAL

A connected smart city comes to life through subtle digital infrastructure networks at dusk.

WHY

The closing image: innovation, collaboration, and infrastructure resolved into one skyline.

PRODUCTION APPROACH

STYLE

- Cinematic Documentary
- Human-Centered Storytelling
- AI-Assisted Production
- Engineering Visualization
- Premium Corporate Film

LOOK & FEEL

- Warm Natural Color Palette
- Authentic Human Moments
- Premium Architecture
- Subtle AI Visualizations
- Minimal Motion Graphics

AI PRODUCTION TECHNIQUES

- AI Image & Video Generation
- Digital Twin Visualisation
- Generative Scene Expansion
- AI Compositing & Cleanup
- AI-Assisted Colour Matching
- AI Voiceover

CREATIVE DIRECTION

The creative approach intentionally combines authentic documentary cinematography with AI-enhanced production. Rather than treating AI as a visual spectacle, it is woven throughout production to strengthen storytelling, accelerate content creation, and visualize complex engineering concepts resulting in a cinematic narrative where engineering, science, data, and technology come together to create meaningful impact for people and the planet.

THANK YOU
