

FINAL ASSESSMENT

FROM PROGRAMME TO NARRATIVE

A Visual Communication Strategy for a Large-Scale Data Centre Development

AI-First Multimedia Designer — Hussein Masri

A 60-Second Executive Journey: Vision to Operations

Scale → Complexity → Delivery → Outcome, told across three acts, each anchored to a real project asset, not a generic template.

SEQUENCE MAP — EACH ACT ANCHORED TO A REAL ASSET

ACT I

Site to Structure

Labelled site model resolves into shell & core — C1-C3, FOH.

ACT II

Structure to System

Resolved masterplan — data hall fit-out tracked building by building.

ACT III

System to Service

Completed render — the journey ends Ready-for-Service, not on construction.

HOW PROGRAMME DATA IS CARRIED — 78-MONTH DELIVERY BAR

PHASE 1 — SHELL & CORE C1-C3, FOH

PHASE 2 — SHELL & CORE C4-C5 + FIT-OUT

PHASE 3 — FIT-OUT C3-C5 + T&C

GC MOBILISED

POWER ON

C1/C2 RFS

T&C & HANDOVER

Transitions match-cut on shared geometry — the site outline in Act I becomes the shell footprint in Act II, the footprint becomes the finished form in Act III.

Five Steps: Source Material to Executive Story

The same sequence for any project — only the inputs change.

**01**

Source Review & Audit

Catalogue every input and flag gaps before any creative decision is made.

**02**

Information Triage

Separate what an executive audience must retain from supporting technical detail.

**03**

Visual Approach per Stage

Assign a treatment per programme phase: plan, render, or iconography.

**04**

Executive Translation

"RIBA Stage 4 sign-off" → "Design Finalised"; "T&C & H/O" → "Ready for Operations."

**05**

Accuracy & Consistency Check

One source-of-truth document; technical lead sign-off before production.

SOURCE MATERIAL

This is what gets audited in Step 01 before a single frame is designed.

Brief to Completion, Anchored to Real Assets

AI extends the real site model and renders — it never replaces them.

TOOLS BY STAGE

Ideation & scripting

ChatGPT, Claude

Image generation

Midjourney, Adobe Firefly, Higgsfield

Video generation

Kling, Google Flow, Higgsfield

Post-production

Adobe Creative Cloud applications

PROMPT DEVELOPMENT

Anchored to the real render via image-to-image reference — not a blank description. Keeps output geometry and materiality consistent with the actual design.

QUALITY ASSURANCE

Every generated frame is checked against the programme and site plan for factual accuracy — building count, phase order, milestone sequence — before a brand and technical-lead sign-off.

DELIVERY WORKFLOW — BRIEF TO COMPLETION

BRIEF & SOURCE AUDIT

STORYBOARD

ASSET GENERATION

QA (TECH + BRAND)

FINAL DELIVERY

Typical duration: 5-7 working days from brief to final delivery, depending on programme complexity.

PROVEN EXECUTION — FRAMES FROM THE DELIVERED WSP FILM (ASSIGNMENT 1)

One Methodology, Applied Across Every Project

Standardised where it should be; flexible where the project demands it.

Reusable Story Template

A fixed act structure (Site → Structure → System → Service) with swappable content for a new project, same narrative skeleton.

Standardised Milestone Language

One icon and terminology set for Power On, RFS, T&C & Handover consistent across every project type, not reinvented per brief.

Templatised AI Pipeline

Reusable prompt structures and reference-anchoring workflow cut per-project production time without cutting quality.

Shared Brand & QA Governance

Same sign-off gate and visual system on every output connects directly to the AI Creative Lab model proposed in Assignment 1.

The goal is not a one-off film — it is a repeatable system that turns any project's programme and design assets into an executive-ready visual story, at consistent quality and speed.

THANK YOU
